Mission operation and Infrastructure Service Division
National Satellite Operation & Application Center
KARI

A change of the National Space Program

- Mid-to-Long Term Space Development Plan : Establishment (1996), 1st Rev.(1998), 2nd Rev. (2000), 3rd Rev.(2005)
- Space Development Promotion Act (2005)
- Basic Plan for Promotion of Space Development: Establishment (2007), 2nd (2011), Mid-to-Long Plan (2013), 3rd (2018)
- 4th Basic Plan for Promotion of Space Development (2023)

1 KARI HQ

Site area (m²) : 317,942

Facility area (m²) : 111,603

- Satellite Test Center
- Ground Combustion Test Center
- Satellite Ground station
- Full-Scale Airframe Static Test Facility
- Rotary Wing Aircraft Test Center
- Wind Tunnel Test Center

2 NARO Space center

Site area (m²) : 5,374,686

Facility area (m²) : 83,232

- KSLV Launch Site
- Mission Operation Center
- Tracking Radar

3 National Aviation Test Center

Site area (m²) : 1,025,445

Facility area (m²) : 8,021

- Aircraft Test Center
- Helicopter Whirl Tower Test Facility

4 Korea Deep Space Antenna

35 M Antenna / 750 ton

- S-Band up/downlink, X-Band downlink

5 Jeju National Satellite Operation Center

Site area(m²) : 61,166

Facility area(m²) : 4,408

- Operation of LEO satellites

6 Jeju Tracking Station

Site area(m²) : 114,811

Facility area(m²) : 2,031

Antenna site (Daejeon)

Satellite Operation Center (SOC)

Satellite Control Room

- The main control room(left) and emergency recovery room(right)
- Use the emergency room in special situations (ex. satellite launch, anomaly occurrence)
- The emergency room is currently in use as Danuri control room

KOMPSAT-1

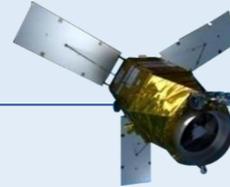

[Mission finished (2008. 7.)]

- Launch date : 1999. 12. 21.
- Orbit : Sun-synchronous (Altitude: 685km)
- Payload : EO (PAN : 6.6m)

KOMPSAT-3

- Launch date : 2012. 5. 18.
- Orbit : Sun-synchronous (Altitude: 685km)
- Payload : EO (PAN/MS : 0.7m/2.8m)

GK-2A (Geo-KOMPSAT-2A)

- Launch date : 2018. 12. 5.
- Orbit : Geo-synchronous (Altitude : 36,000km)
- Payload : AMI(1km), KSEM

KOMPSAT-2 (In-operation)

[Mission finished (2015. 9.)]

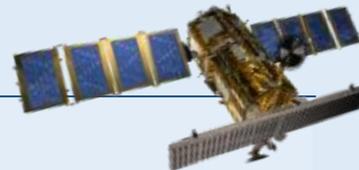

※ Additional missions are still being carried out after the official mission ends

- Launch date : 2006. 6. 28.
- Orbit : Sun-synchronous (Altitude: 685km)
- Payload : EO (PAN/MS : 1m/4m)

KOMPSAT-5

- Launch date : 2013. 8. 22.
- Orbit : Sun-synchronous (Altitude: 550km)
- Payload : SAR (High 1m/Standard 3m/ Wide 20m)

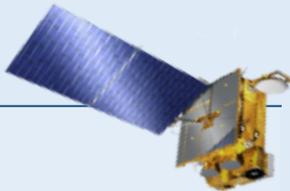

GK-2B (Geo-KOMPSAT-2B)

- Launch date : 2020. 2. 19.
- Orbit : Geo-synchronous (Altitude : 36,000km)
- Payload : GOCI-II(250m)/GEMS(7.5km)

COMS

- Launch date : 2010. 6. 27.
- Orbit : Geo-synchronous (Altitude: 36,000km)
- Payload : KA-band/GOCI(500m)/MI(1~4km)

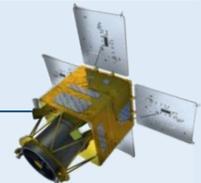

KOMPSAT-3A

- Launch date : 2015. 3. 26.
- Orbit : Sun-synchronous (Altitude: 528km)
- Payload : EO (PAN/MS/IR : 0.55m/2.2m/5.5m)

CAS500-1

- Launch date : 2021. 3. 22.
- Orbit : Sun-synchronous (Altitude : 36,000km)
- Payload : EO (PAN/MS : 0.5m/2m)

KOMPSAT: Korea Multi Purpose SATellite (Korean name: Arirang)

COMS: Communication Ocean and Meteorological Satellite (Korean name: Cheollian)

CAS500: Compact Advanced Satellite 500

Termination

Mission Start

COMS Launch

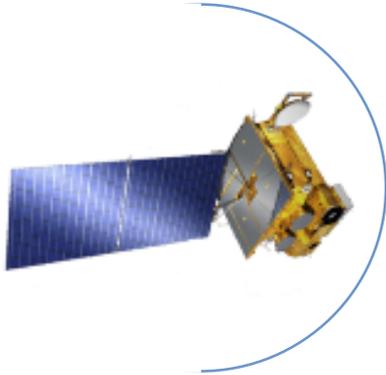

MI: Meteorological Imager
GOCI: Geostationary Ocean Color Imager

Ground segment architecture

Purpose

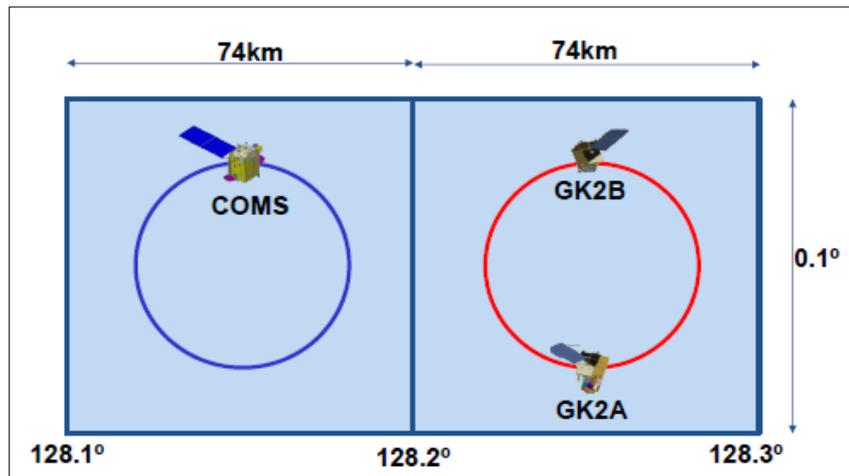

- Weather and ocean observation
- Space certification and utilization of communications payload (KA-band)
- Independence and industrialization of geostationary satellite technology
- Overseas Joint Development of Geostationary Satellite

Operational history

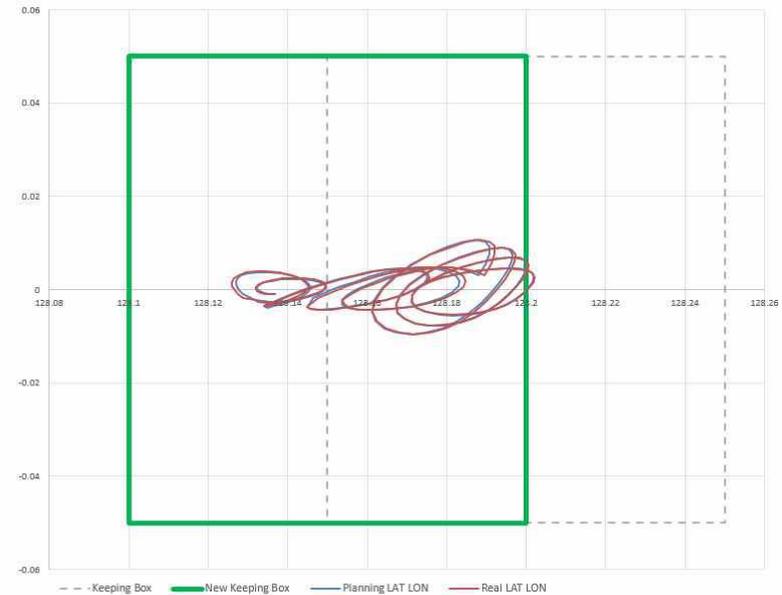

- 01** Launch: 2010.06.27
- 02** Normal mission period: 2011.04.01~2018.03.31 (7 years)
- 03** 1st Mission extension: 2018.04.01~2020.03.31 (2 years) → MI mission finished
- 04** 2nd Mission extension: 2020.04.01~2021.03.31 (1 year) → GOCl mission finished
- 05** 3rd Mission extension: 2021.04.01~2022.03.31 (1 year)
- 06** 4th Mission extension: 2022.04.01~2023.03.31 (1 year)
- 07** 5th Mission extension: 2023.04.01~2024.03.31 (1 year)

Major operational change

- Orbit Adjustment for Central longitude Movement ('18.8)
- Orbit movement for simultaneous operation with GK-2A/B
 - Central longitude : $128.2^{\circ} \rightarrow \underline{128.15^{\circ}}$
 - GK-2A/B: $\underline{128.25^{\circ}}$

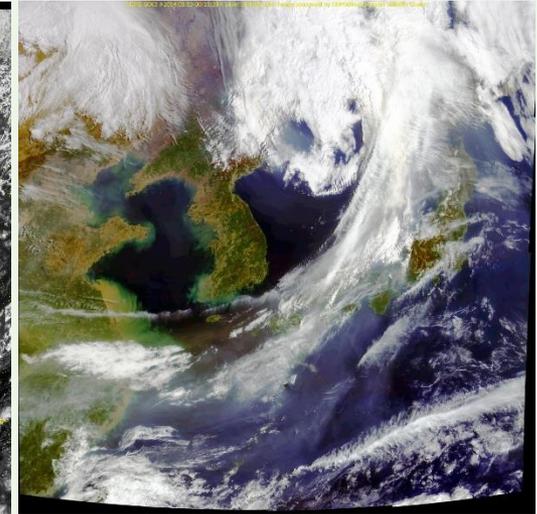

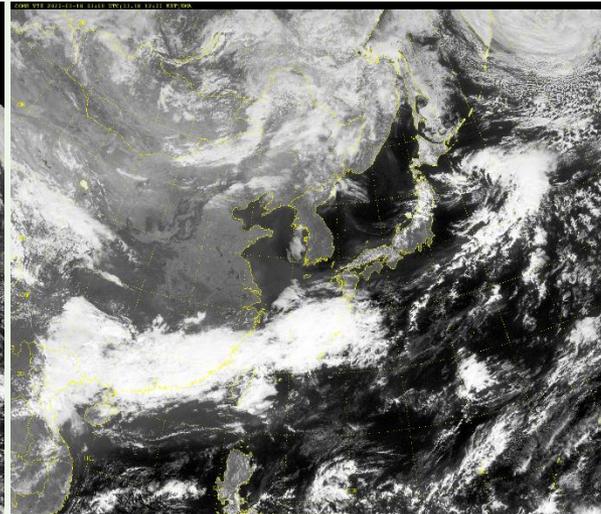

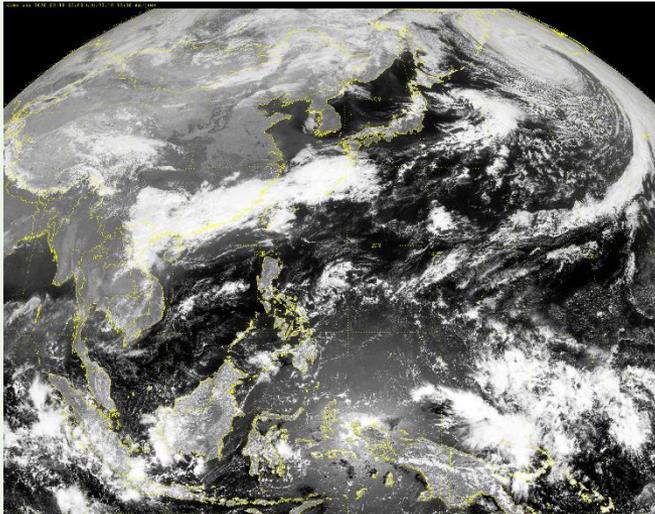

Conceptual diagram of simultaneous operation of the Geostationary satellites

Change in LAT/LON according to orbital movement

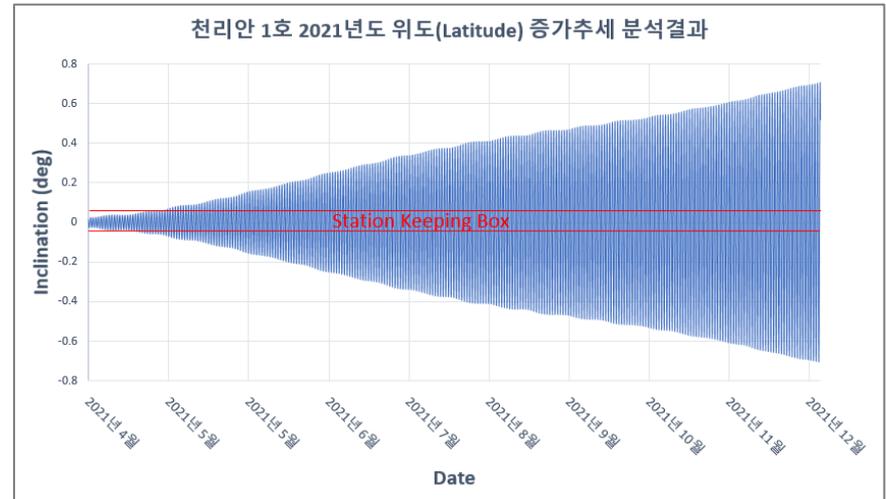

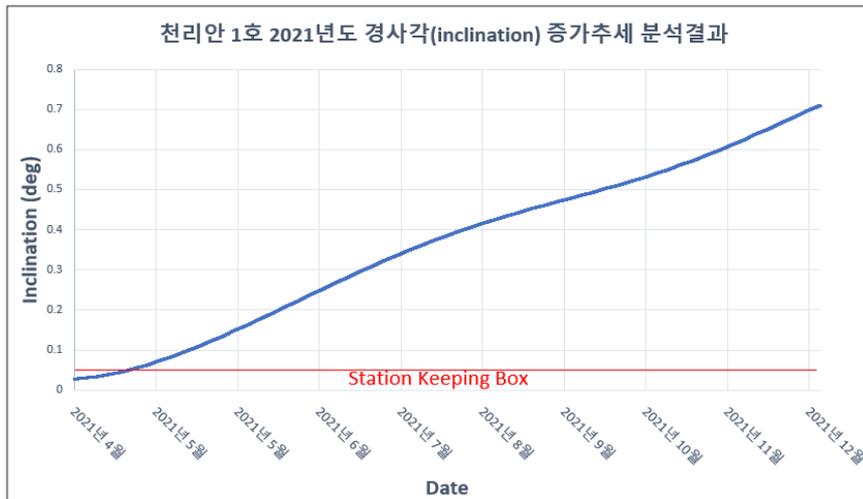

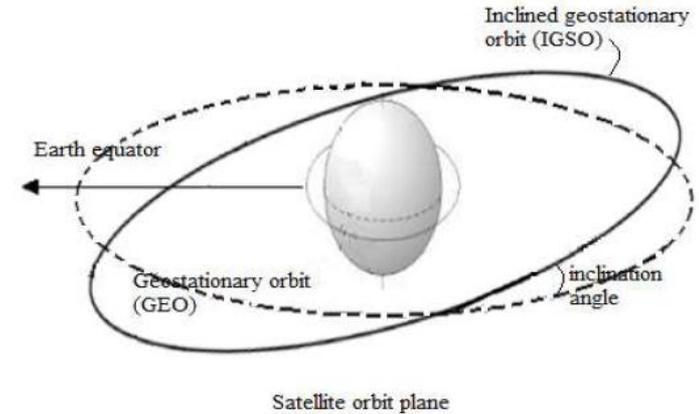

End of Mission (MI/GOCI)

- MI ('11.4~'20.3, 9 years)
- Earth observation taken 564,264 times
- Mission success rate 99.81%
 - Full disk(FD): 27,209 times
 - Extended North Hemisphere(ENH): 250,249 times
 - Local Area(LA): 286,806 times
- GOCI ('11.4~'21.3, 10 years)
- Earth observation taken 31,112 times
- Mission success rate 99.66%

Inclined-orbit operations ('21.04~)

- Non-performance of NS station keeping
- Reduces fuel consumption
- Get longer operational periods

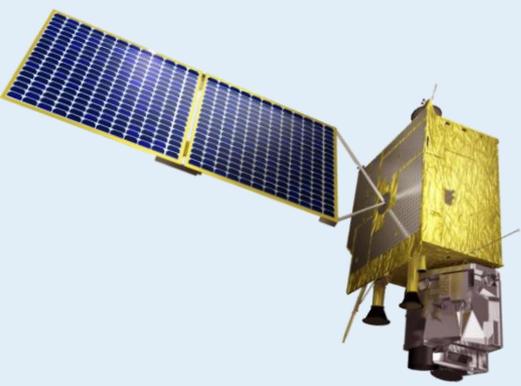

Purpose

- Weather, space weather, environment, and ocean observation at all times
- Improve weather forecast reliability, Climate Change Response
- Fine dust observation, marine environment observation
- Securing self-supply capacity for domestic geostationary satellite demand

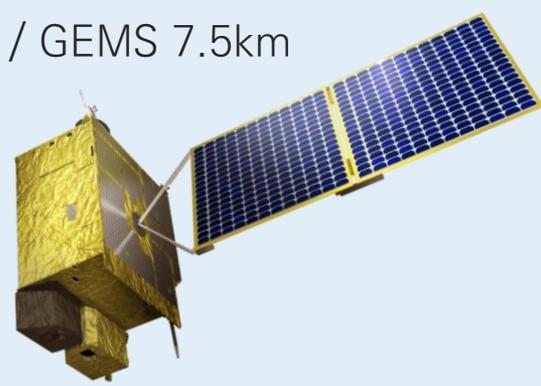

GK-2A

GK-2B

AMI 1km	Resolution	GOCI-II 250m / GEMS 7.5km

2.6kw	Power	2.6kw
10 years	Mission Life	10 years

GK-2A
〈Launch: 2018.12.05〉

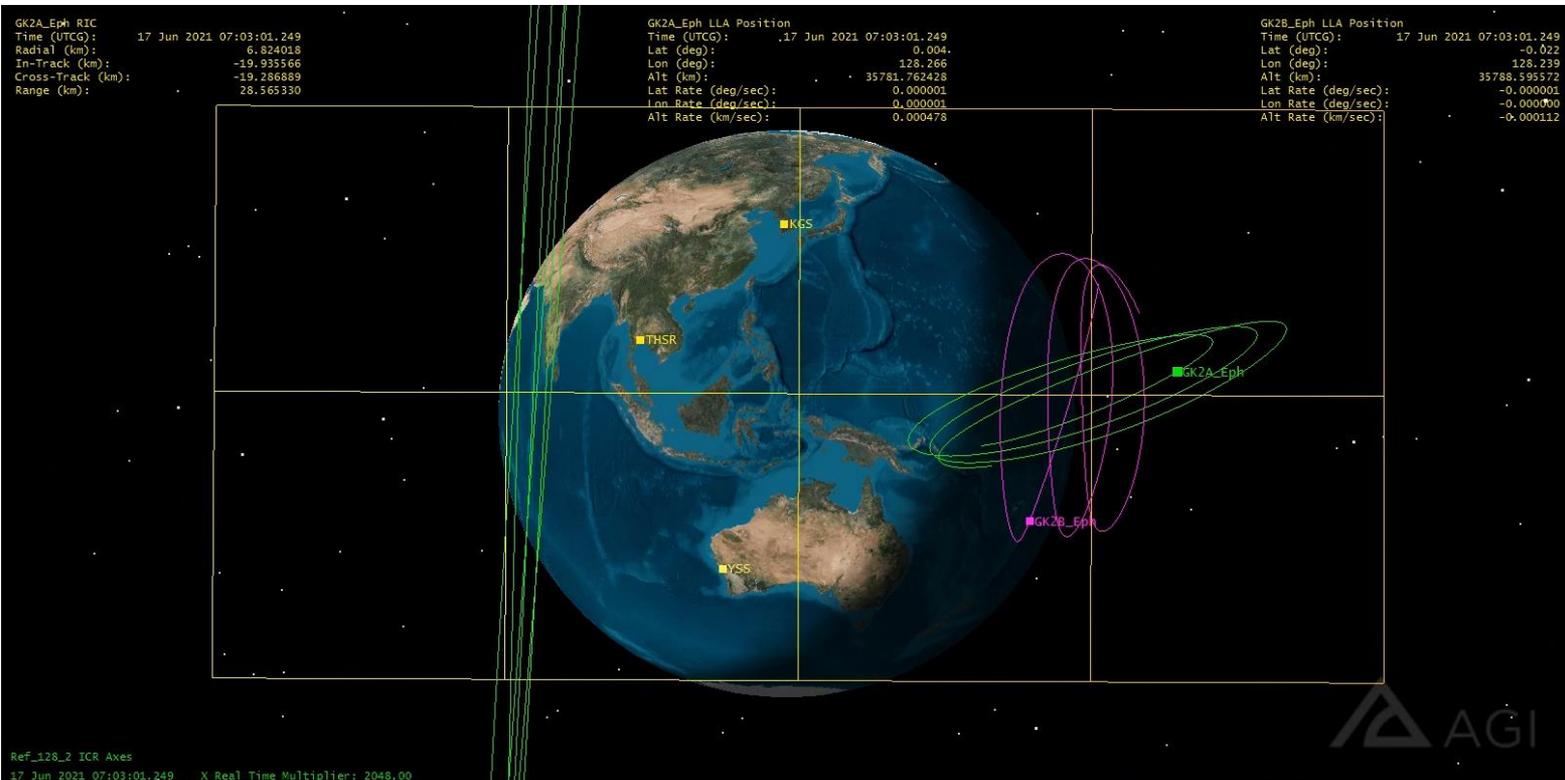

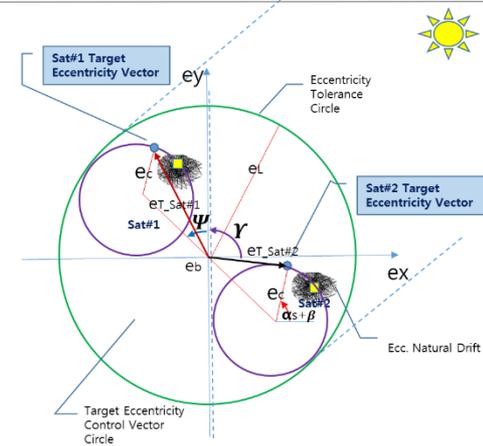

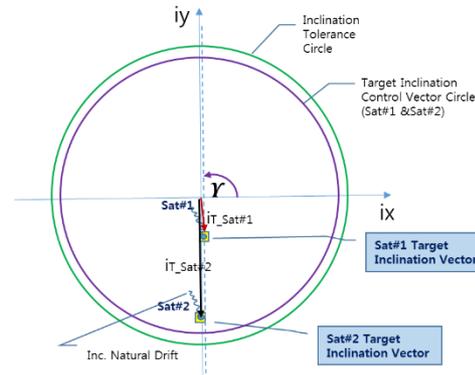

GK-2B
〈Launch: 2020.02.19〉

〈Guiana Space Centre / Ariane-5 Rocket〉

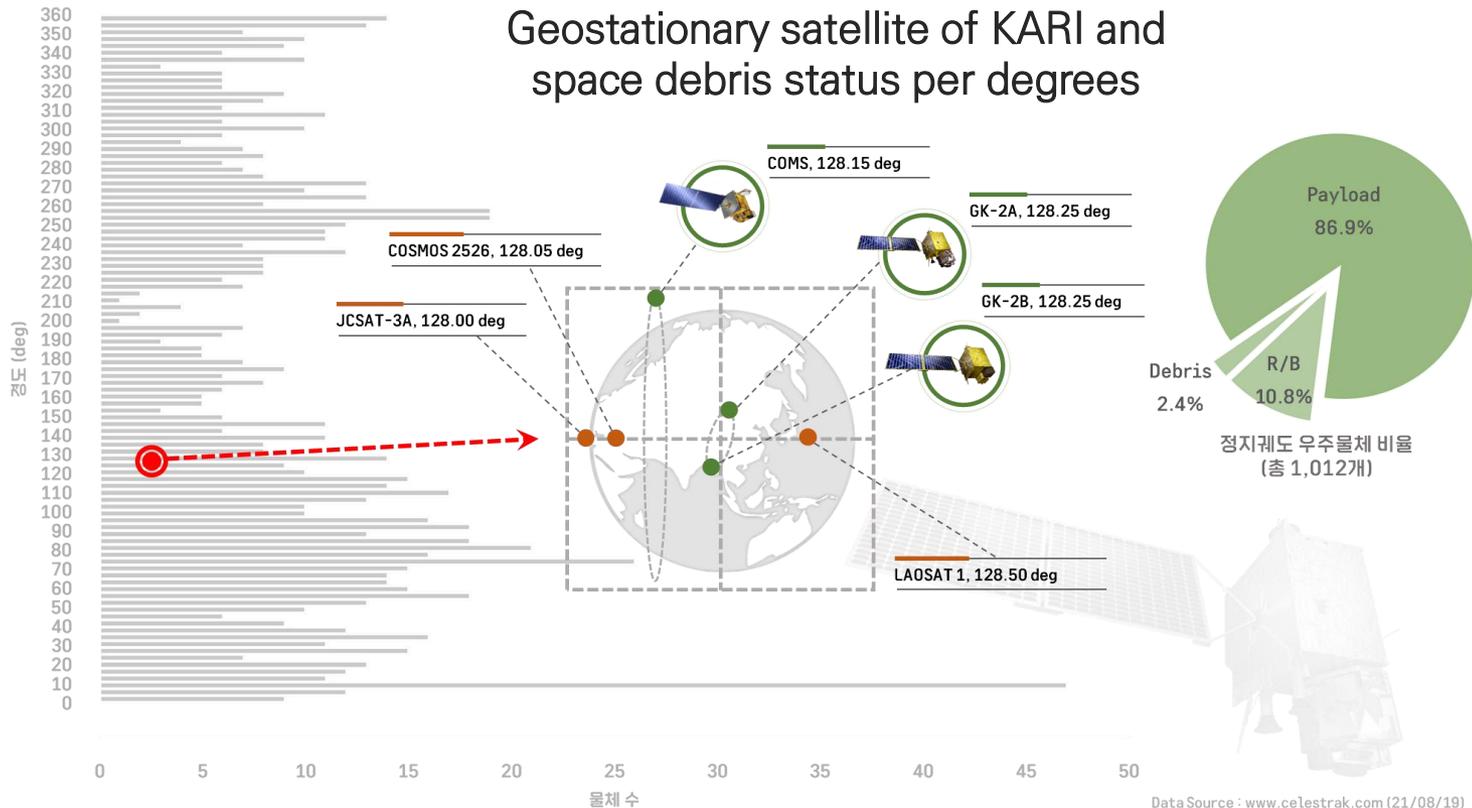

Collocation Strategy

- Fixed inclination target
- Eccentricity vector is defined using the fixed inclination target vector
- Minimum separation is guaranteed

Space Situational Awareness (SSA)

- Constant monitoring to prevent collisions with space debris
- Establish avoidance activation plan through detailed analysis when close objects occur
- Approximately 10 maneuvers were carried out to avoid collisions

Annual operation

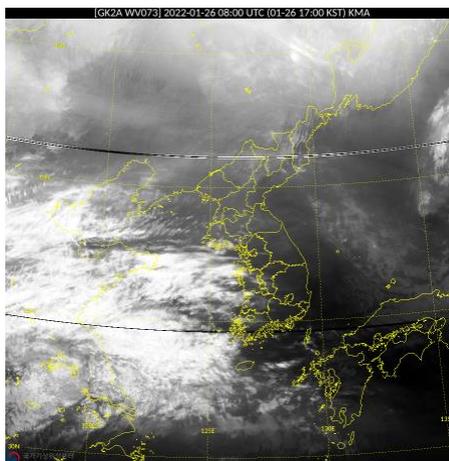

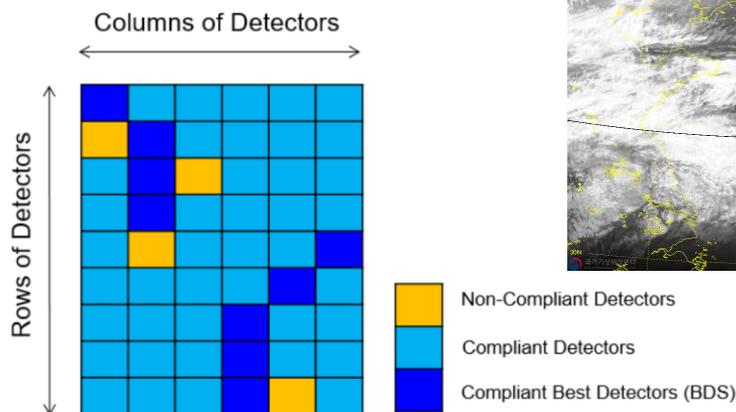

- **Battery balancing** and eclipse period operation(Feb.~May, Aug.~Oct.)
- **Sun interference** monitoring and analysis (Mar., Oct.)
- Battery charge at the Sun eclipse by the Moon
- AMI Scanner calibration

Monthly operation

- AMI Solar calibration (for GK-2A)
- **Moon imaging** (for GK-2A)
- GOCI- II Video parameter update (for GK-2B)
- Battery charge at the Sun eclipse by the Moon
- Antenna condition check
- Ground station subsystem condition check
- Special operation for storm chasing (related with Kim's poster)

AMI BDS(Best Detector Selection) map update

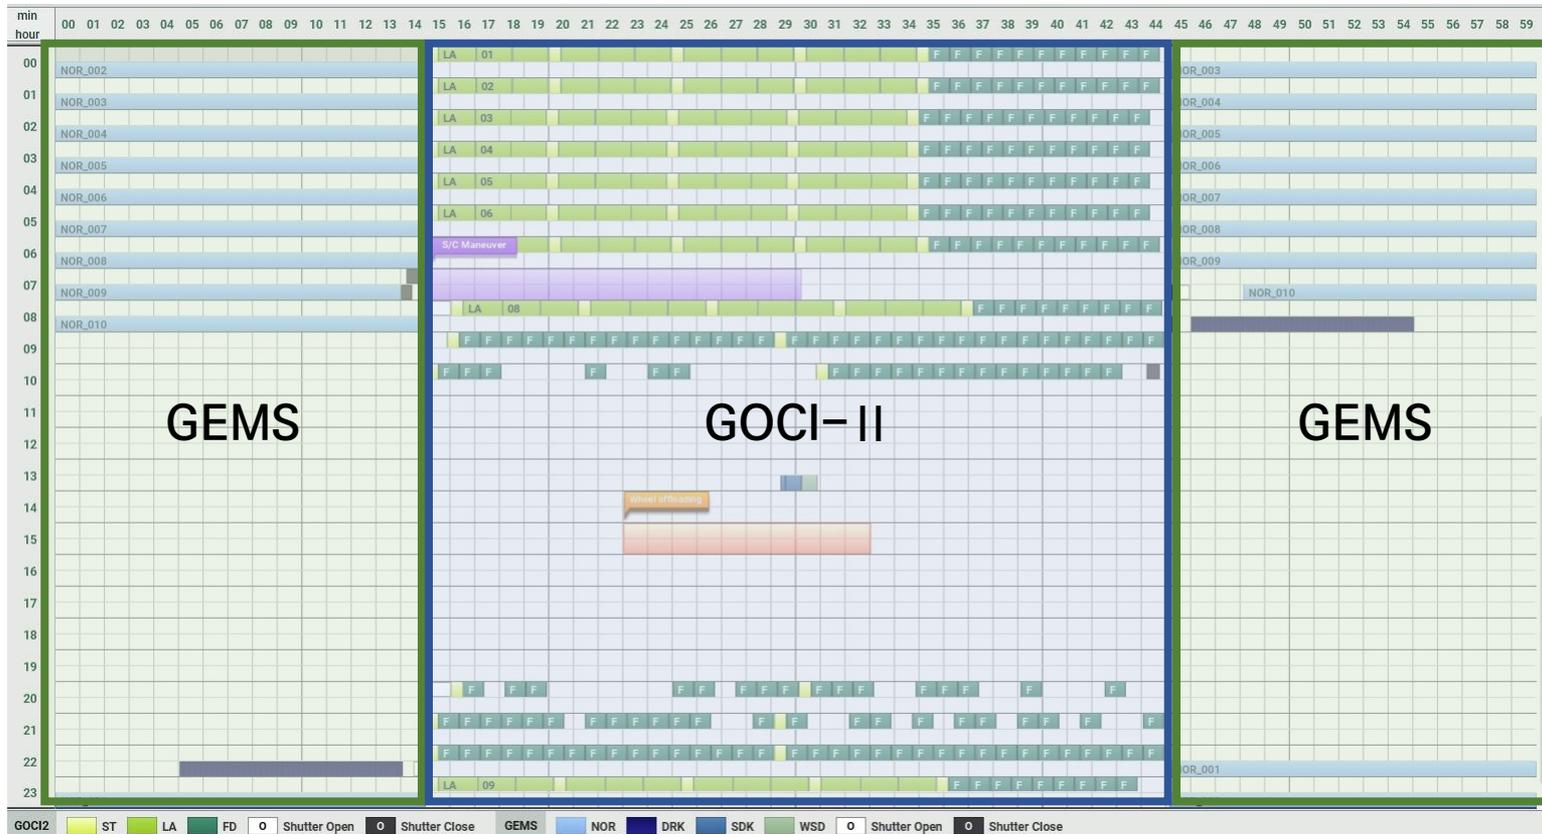

- AMI has 6 detectors per row (except VIS004~VIS008)
- Generate the Earth observation image using observation values from the best performing detector among them
- When image quality deterioration occurs, such as detector performance degradation during normal operation, the detector is changed (Jin et al., 2021)

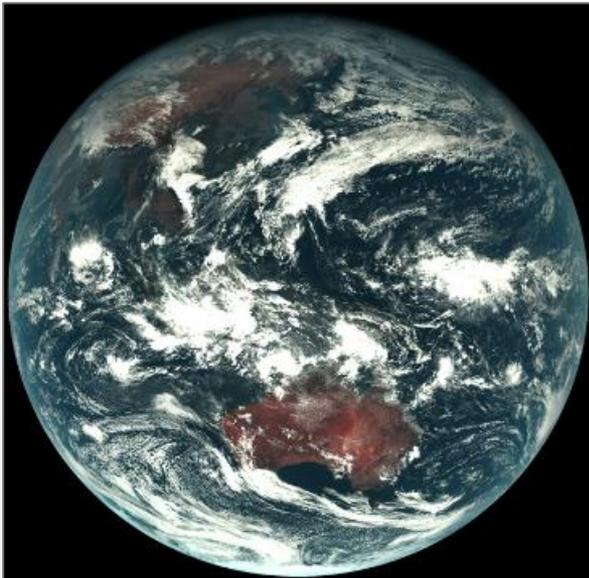

No	Channel	Row	Detector	Date
1	WV073	46	2→6	2019.07
2	WV073	172	1→6	2019.11
3	WV073	235	4→1

22	WV069	195	2→3	
23	IR096	60	6→4	
24	WV063	102	1→3	2022.02
25	WV073	155	3→6	2022.04
26	WV069	192	5→4	2023.05

GOCI-II & GEMS co-operation

- Both GK-2B payloads can only observe during the daytime
- Cut an hour in half, GOCI-II for 15 to 45 minutes and GEMS for 45 to 15 minutes
- Overlapping operation with SK and WOL is not possible

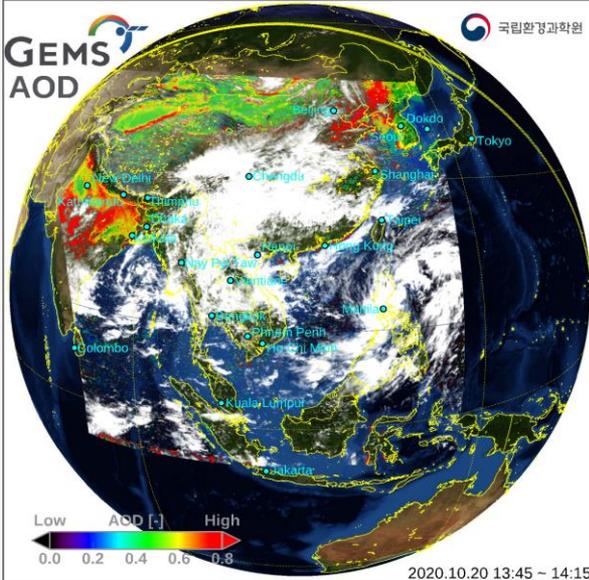

GK2A

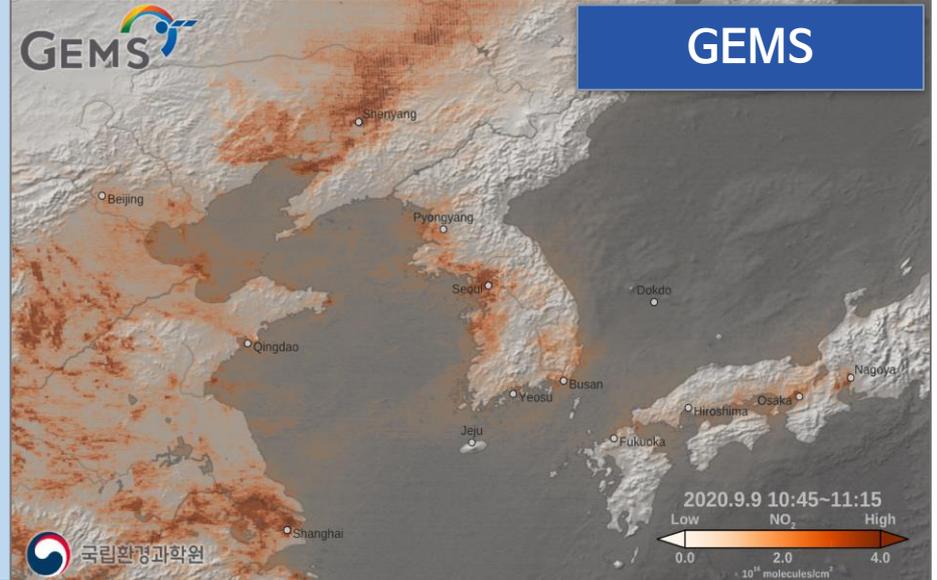

GOCI-II

GK2B

GEMS

Geostationary Orbit Public Multipurpose Communication Satellite

■ Purpose

Disaster/Emergency communication and precision navigation reinforcement support to prepare for a communication paradigm shift

■ Development period

2021.04~2027.12

■ Launch date

Scheduled for the second half of 2027

■ Specification

Operating orbit: 36,000km, Geostationary orbit

Size: 3.2m x 2.5m x 3.5m (3.5 ton), Power : 5.3kw

Mission Life : 15 years

■ Payload type

- Flexible broadband communication system(FBCS)
- Data Collection System(DCS)
- Satellite-Based Augmentation System(SBAS)

The image features a space-themed background with the Earth's horizon at the bottom, a large moon in the upper center, and a starry sky. A rocket launch is depicted as a vertical blue and white streak of light originating from the Earth's surface and extending upwards. The KARI logo is centered in the upper half of the image, consisting of a stylized white 'A' shape above the text 'KARI' in a bold, sans-serif font. To the left of 'KARI' is the text 'KOREA AEROSPACE' and to the right is 'RESEARCH INSTITUTE'.

KOREA AEROSPACE **KARI** RESEARCH INSTITUTE

Purpose

- Acquiring lunar exploration technology capabilities
- Development of Moon Exploration System for Moon Science Mission
- Key Technology Study in Phase 2 of Moon Exploration

Launch date : 2022. 8. 5.(Fri) 08:08 KST

Course of Navigation (Earth to Moon)

- Launch (8/5 08:08)
- Enter the WSB/BLT transfer orbit (8/5 08:58)
- 1st maneuver for moving trajectory (8/7)
- 2nd maneuver for moving trajectory (9/2)
- Maximum distance reached
- 3rd maneuver for moving trajectory (11/2)
- 4th maneuver for moving trajectory (11/6)
- Enter the Moon orbit and 3 times maneuver (12/17,12/21,12/26)
